

WINNER BERSEEM CLOVER

Multiple Cuttings

Better Quality Forage

Faster Growth

More Production

Winner has excellent seedling vigor with most plants establishing large crowns. Berseem is very palatable and is relished by all livestock and wildlife.

Berseem forage contains approximately 18 to 28 percent crude protein depending on growing conditions. This is comparable to alfalfa.

Berseem has tremendous potential for providing high quality forage and improving soil conditions as a green manure crop because of its fast growth characteristics and capacity to fix nitrogen in the soil which benefits the following crop.

Characteristics:

This clover is an annual legume with oblong leaflets and hollow stems. Growth is upright and has yellowish white flowers

Field Advantages:

Multiple cuttings for more production. Recovery following cutting is very rapid.

Areas of Adaptation:

Well suited for virtually all US states. Winner produces best results when grown in medium-loam soils that are slightly alkaline.

Yield Trial Comparisons:

Competitor	Winner Yield Advantage over Competitor	Yield of Competitor	Yield of Winner	Total Harvest/ Years
